GIO VENTURA BARRAMEDA

Software QA Engineer
gio.barrameda25@gmail.com | 0950-113-7412 | Antipolo City, Rizal | linkedin.com/in/giobarrameda

PROFESSIONAL SUMMARY

QA Engineer with 3+ years of experience in manual functional, integration, regression, API, and automated testing for document processing and HR/payroll systems. Reduced production-critical defects by ~30% through structured regression testing and root cause analysis. Hands-on API testing with Postman (response accuracy, status codes, data synchronization) and automated testing with Playwright, plus Azure DevOps defect tracking and Elasticsearch log monitoring; building Python and TypeScript automation skills.

WORK EXPERIENCE

Software QA Tester | Side International Philippines, Inc., Makati City | October 2026 - Present
- Perform API and functional testing across different systems, validating request/response accuracy, status codes, and data handling against requirements.
- Execute regression testing on new builds and releases and log defects with clear reproduction steps to confirm existing functionality remains stable.

QA Engineer I | Actimai Philippines, Inc., Pasig City | June 2024 - May 2026
- Reduced production-critical defects by ~30% through structured regression testing and root cause analysis, using Elasticsearch log monitoring to trace failures to their source and improve product reliability.
- Performed API testing with Postman on 3-5 endpoints per week to validate backend services, designing positive and negative test cases and verifying request/response accuracy, status codes, and data synchronization across systems.

Junior QA Engineer | Actimai Philippines, Inc., Pasig City | February 2023 - June 2024
- Developed and maintained test plans and execution reports, writing and executing 75-100 test cases per feature across functional, integration, regression, and usability testing.
- Logged and tracked about 20 defects per week in Azure DevOps through resolution, ensuring fixes met user acceptance criteria and validating workflow accuracy and product readiness prior to release.

PROJECTS

Document Processing Platform | Manual and API Testing (Postman)
- Tested document ingestion, workflow processing, and data extraction modules, validating API endpoints in Postman to confirm correct responses and system reliability.
- Coordinated with developers during issue resolution to maintain data integrity across processing stages.

HR Portal System | Functional, User Acceptance, and Automated Testing (Playwright)
- Validated attendance, payroll, and team management modules and supported stakeholders during acceptance activities, ensuring accurate report generation.
- Built automated test scripts with Playwright for key HR Portal workflows such as attendance and payroll report checks, reducing repetitive manual regression effort.

SKILLS

Testing: Functional, Integration, Regression, Usability, and User Acceptance Testing; Test Plans and Test Cases; Defect Management; Root Cause Analysis; API Testing (request/response validation, status codes, positive and negative scenarios)
Tools: Postman (API testing), Azure DevOps (work-item and defect tracking), Elasticsearch (log monitoring), UiPath Studio (basic), Playwright (automated testing)
Methodologies: SDLC, STLC, Agile, Requirements Analysis, Equivalence Partitioning, Boundary Value Analysis, Decision Tables, State Transition Testing
Professional: Cross-Functional Collaboration, Stakeholder Management, Technical Documentation, Process Improvement

EDUCATION

Bachelor of Science in Computer Engineering | Polytechnic University of the Philippines, Sta. Mesa, Manila | November 2022
Cum Laude

TRAINING

ISTQB Foundation Level Training; Software Test Engineer Training
